

Nottingham – a centre of excellence

The NIHR Nottingham Clinical Research Facilities form a network of dedicated facilities that together make up a centre of excellence, bringing together the latest cutting-edge technology with world-leading clinical expertise.

Based at Nottingham University Hospitals NHS Trust (NUH), one of the largest and busiest teaching hospitals in the UK we work in close collaboration with the University of Nottingham. This gives us 2,000m² of NIHR accredited facilities managed by clinical and specialist staff expert in developing and delivering experimental medicine.

At the heart of the facilities in Nottingham is our expertise in translational Magnetic Resonance Imaging. Alongside substantial investments from UK research funding bodies, the NHS and the University of Nottingham, the Sir Peter Mansfield Imaging Centre is recognised internationally as a leading centre for translational research. The centre combines the expertise and multidisciplinary skills of both Magnetic Resonance physicists and clinical academics.

Developing a new medicine requires a diverse range of expertise. The Nottingham CRF brings together the academic, NHS and industry expertise required to effectively deliver complex and intensive study protocols.

Our facilities benefit from co-location with the East Midlands Major Trauma Centre, and the high quality Emergency Department and Intensive Care Units at NUH, enabling us to deliver a diverse range of studies, including those involving radiotherapy, gene and stem cell therapy.

Our multi-disciplinary teams are experienced in co-ordinating input across multiple agencies and specialties to bring patients with complex medical needs across to the UK safely and to ensure that the experience is as comfortable as possible for families during inpatient stays.
